The American College of Radiology is the copyright owner with respect to a work entitled American College of Radiology Appropriateness Criteria[®] (hereinafter referred to as the “ACR Appropriateness Criteria[®]”), which contains clinical practice guidelines for appropriateness criteria developed using a modified Delphi technique to arrive at a consensus and intended to guide radiologists, radiation oncologists, referring physicians, and patients in making initial decisions about diagnostic imaging and therapeutic techniques.

All the ACR Appropriateness Criteria[®] material on this server is protected by U.S. and international copyrights. Personal use of material is permitted for research, scientific and/or information purposes only. You may not modify or create derivative works based on American College of Radiology material. No part of any material posted on the American College of Radiology Web site may be copied, downloaded, stored in a retrieval system, or redistributed for any other purpose without the expressed written permission of American College of Radiology.

Requests for permission to use copyrighted material may be e-mailed to the American College of Radiology at acr_ac@acr.org.

Disclaimer

An ACR Committee on Appropriateness Criteria and its expert panels have developed criteria for determining appropriate imaging examinations for diagnosis and treatment of specified medical condition(s). These criteria are intended to guide radiologists, radiation oncologists, and referring physicians in making decisions regarding radiologic imaging and treatment. Generally, the complexity and severity of a patient's clinical condition should dictate the selection of appropriate imaging procedures or treatments. Only those exams generally used for evaluation of the patient's condition are ranked. Other imaging studies necessary to evaluate other co-

existent diseases or other medical consequences of this condition are not considered in this document. The availability of equipment or personnel may influence the selection of appropriate imaging procedures or treatments. Imaging techniques classified as investigational by the FDA have not been considered in developing these criteria; however, study of new equipment and applications should be encouraged. The ultimate decision regarding the appropriateness of any specific radiologic examination or treatment must be made by the referring physician and radiologist in light of all the circumstances presented in an individual examination.

The American College of Radiology seeks and encourages collaboration with other organizations on the development of the ACR Appropriateness Criteria through society representation on expert panels. Participation by representatives from collaborating societies on the expert panel does not necessarily imply society endorsement of the final document.

Warranty

Warranty limitations:

- (i) ACR Appropriateness Criteria[®] is provided on an “as is” basis, without warranties of any kind, either express or implied, including, but not limited to, warranties of title, or implied warranties of merchantability or fitness for a particular purpose;
- (ii) the use of ACR Appropriateness Criteria[®] is at your own risk;
- (iii) access to ACR Appropriateness Criteria[®] may be interrupted and may not be error-free;
- (iv) neither the American College of Radiology or anyone else involved in creating, producing, or delivering ACR Appropriateness Criteria[®] contained therein, shall be liable for any direct or indirect, incidental, special, consequential, or punitive damages arising out of your use or inability to use ACR Appropriateness Criteria[®].

Agreement
