

Important Information

(NMAP, PETAP* & UAP only)

Many CD viewers take a very long time to load into a PC and, in addition, some are not very user-friendly. As a result, many of the image reviewers have contacted us requesting that sites submit digital images in JPEG, GIF, TIFF or BMP format if you are able to do so. This would be greatly appreciated for both clinical and phantom images.

If reviewers experience difficulty with a CD submission, they will now be returning them and this will result in a significant delay of your accreditation.

Thank you!

***Only coronal PET images with and without attenuation correction should be submitted for Oncology. CT images are NOT required.**
