

Patients With a Normal Exam

Thank you for obtaining your Low-dose Early Lung Cancer Detection CT at Hoag Hospital.

Your scan was negative for lung cancer. A copy of your scan interpretation will be mailed to your doctor. If you have further questions about your scan or pulmonary health, please contact your personal physician. If you do not have a physician, please call the Hoag Lung Cancer Coordinator (at xxx-xxx-xxxx) who can answer questions or refer you to one of our lung physician specialists.

Individuals with heavy smoking histories remain at risk for lung cancer in future years. Many national cancer and pulmonary organizations are now recommending annual screening exams for patients at risk for lung cancer.

Many other types of cancers and serious diseases can be prevented, cured, or more successfully treated if detected early. For your convenience, we have enclosed a list of recommended screening tests to assist you in optimizing your health future.
