Follow the patient as he travels along the path of care. Notice the important tools the radiologist can use to help the patient along the way. Read what experts in the field have to say about Imaging 3.0™ and scan the QR codes to watch or listen to ACR volunteers and staff discuss the resources necessary to demonstrate value in your patients' health care.

"ACR Select™ plays a critical role in the implementation and value proposition of Imaging 3.0™. These evidence-based criteria, developed over the last 20 years, are the most complete set of criteria, presenting guidance for virtually every clinical scenario."

—Michael Mardini, CEO, NDSC

"We're in an age of very active patient participation in health care. RadiologyInfo.org is a tool to help keep patients informed about radiology procedures recommended by their health-care providers."

—William T. thorworth Jr., MD, FACR, Member of the RSNA Board

"The Radiology Cares campaign is intended to emphasize and reinforce the need for radiologists to align their practice patterns in response to patient needs."

—William T. thorworth Jr., MD, FACR, Member of the RSNA Board

"The National Lung Screening Trial, demonstrating that lung cancer screening with CT can reduce lung cancer mortality, is a powerful example of how radiologist-led research can have a major impact on health outcome."

—Mitch D. Schnell, MD, PhD, FACR, ACRIN Chair of the RSNA Board

"The entire pathway of all patient information (text and imaging) needs to be optimized so that the patient receives the best care. Meaningful Use does that with its regulations, and Imaging 3.0™ defines that in large part by our vision of what this care continuum for imaging services and associated imaging data should be."

—Keith J. Dreyer, DO, PhD, FACR, Chair of the ACR Clinical Research Commission

"Through ABR certification, our diplomates demonstrate that they have obtained and are continuously maintaining the requisite standards essential to safe and competent practice."

—James F. Borgstede, MD, FACR, President of the ABR Board of Trustees

"Through ABR certification, our diplomates demonstrate that they have obtained and are continuously maintaining the requisite standards essential to safe and competent practice."

—James F. Borgstede, MD, FACR, President of the ABR Board of Trustees

"RSNA Image Share is a form of image exchange that enables the patient to directly control the distribution of their imaging examinations. This is true patient engagement."

—David S. Mendelson, MD, FACR, Member of the RSNA Radiology Informatics Committee
